Describe how and in what capacity your business is otherwise involved in or has the ability to impact the security of cardholder data. For example:

- Connections into and out of the cardholder data environment (CDE).
- Critical system components within the CDE, such as POS devices, databases, web servers, etc., and any other necessary payment components, as applicable.

WorldNet TPS processes and transmits internet based card-not-present (E-commerce) and card-present (mPOS) transactions between merchant and acquirers.

Sensitive authentication data from the website (CVV2/CVC2) is transmitted via WorldNet TPS servers to acquiring banks for authorisation and is not stored in any form.

Where authorisations are successful, the PAN is stored in an encrypted format.

For the mPOS service, once transactions are authorised, WorldNet TPS stores the encrypted PAN. For this service, only the mPOS back-end payment processing processes and infrastructure are in scope - the responsibility for management of mPOS terminals is with each individual merchant offering this facility.

All critical devices within the CDE, such as web servers, application servers, database servers, firewalls and switches were in scope.

Does your business use network segmentation to affect the scope of your PCI DSS environment?
